Particle whose mass is set by the interaction with the Higgs field	Role of the particle masses	Impact on everyday life	Has the Higgs-particle interaction been experimentally confirmed?
Up quark (<i>m</i> _{up} ~2.2 MeV/c²) Down quark (<i>m</i> _{down} ~4.7 MeV/c²)	Affects the mass of the proton and neutron	Differences in quark masses (m _{up} < m _{down}) contribute to protons (made of two up and one down quarks) being lighter than neutrons (made of one up and two down quarks). As a result, protons are stable, as required for the existence of hydrogen.	No
Electron	Atomic radius ∝ 1/m _e	A different value of the electron mass would modify the energy levels and chemical reactions of all known elements.	No
W boson	Radioactive beta decay rate ~ 1/m _W ⁴	Many radioactive decays, and the fusion reactions that power the sun, involve the W boson. The W mass affects the rate of all of these reactions.	Yes
